SEC EAGLES LITEPAPER

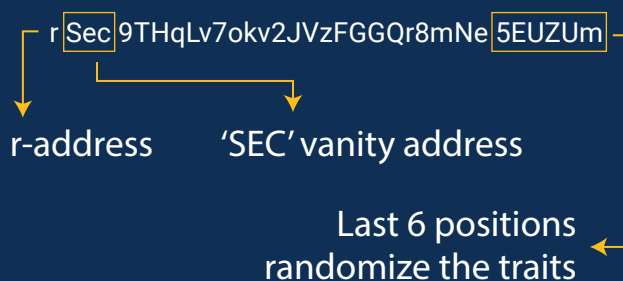

SEC Eagles is a proof of concept limited run of 1000 unique randomly generated eagle characters available as XRP ledger (XRPL) non-fungible tokens (NFTs)

These NFTs will be unique and non-divisible, utilizing the XLS-14d protocol (for now). Files will be held off-ledger at a subdomain *.secwarrior.club. This subdomain will be verifiably pointed to by each NFT's unique issuing address' domain

- Each issuing address will remain unlocked as to allow easy transition to future XRPL NFT protocols such as XLS-20d
- On request, we will black hole an issuer account for any verified NFT owner

These NFTs will each have a unique issuing address which generates the characteristics of each eagle

Each SEC Eagle will be numbered #1-#1000

Number #1 will be only one of the planned 1000 not to be randomly generated

These NFTs will initially be made available for purchase via an auction/bidding process for SuperEagle Coin only at SuperEagleCoin.co, Telegram, and Discord

- Owners of the SECWarriorClub token get a 10% discount in SuperEagle Coin off the final sale price for this initial purchase, primary market.
- There will be a process for owners to relist their SEC Eagles for auction on our platform in a currency of their choosing for a fee of 5% of the final sale price, secondary market
